DESCRIPTION:

Series 2 are centrifugal magnetic drive pumps, eliminating the need for a shaft seal. Pumps can be serviced with a screwdriver. The "LC" model is hermetically encapsulated allowing the pump to run fully submerged or in open air for complete moisture protection. Model 2CP-MD must be run submerged only. See the parts list for a breakdown of parts. BC models have an encapsulated impeller magnet.

OPERATION:

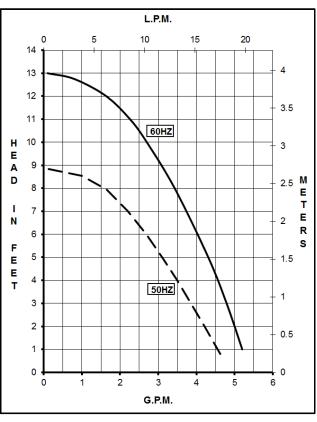

Pumps are not self-priming, lack a suction lift, and thus require a **flooded suction**. Pumps **cannot be run dry** because the impeller requires the liquid being pumped for lubrication. For liquids with a specific gravity greater than water, have a higher viscosity, or for elevated temperatures, a trimmed impeller may be necessary. For application assistance, contact March Pump.

ELECTRICAL:

Pumps are U.L. Recognized under File No. E80954. U.L. Recognition On Pumps Is For Water Only. Model 2CP-MD 115 V has a 6 ft (1.8 m) cord with plug, 230 V has a 6 ft (1.8 m) cord. Models LC-2CP-MD 115 V & 230 V have a 6 ft (1.8 m) cord.
