

## Powerful, Compact Air Conditioning a Perfect Fit for Renegade Power Boats

### Limited Space for Air Conditioner Installation

Naval patrol vessels operate at high speeds in rough water, and in hot climates crew members need a place to escape the heat. Patrol vessels are high in performance but short on available space, and the boats are often subjected to punishing usage when on duty.

Renegade Patrol Vessel destined for the Colombian Navy

Florida-based Renegade Power Boats specializes in the supply of high-performance vessels to both the recreational and commercial marine sectors. Renegade received an order from the Colombian Navy for two new patrol vessels after successfully delivering eight patrol boats the previous year.

Because the patrol boats are constantly in use, any downtime due to equipment failure must be limited. Renegade Power Boats has proven its reliability to the Colombian Navy, and the boats are easy to service when problems arise.

### Compact EnviroComfort Units Pack Performance

Dometic's EnviroComfort (ECD) units were again chosen to provide marine air-conditioning aboard the new Renegade patrol boats. Exceptionally compact, ECD units can be easily installed within small cabins, making them ideal for boats which have limited space on-board.

EnviroComfort Retrofit Kit with compact digital keypad/display

The ECD Retrofit Kit cools and heats and includes an easy-to-use compact digital keypad/display. The ECD Installation Kit (below) has all plumbing and air distribution components needed for a complete A/C installation. ECD units are available 6,000, 11,000, and 16,000 BTU/hr capacities.

### Durable & Reliable A/C for Extreme Conditions

The ECD Installation Kit contains all plumbing and air distribution components for a complete A/C installation

"Having already installed Dometic's EnviroComfort air conditioning systems aboard eight patrol boats, we have been very impressed by the performance of the units," said

Amed Oses, President, Renegade Power Boats. "Its low-profile design enables the system to fit neatly into small spaces on-board, which made it a natural choice when we were commissioned by the Colombian Navy to supply a further two vessels for the fleet."

The durability and reliability of EnviroComfort units have proven them suitable for use on Renegade patrol boats, while their compact size allows them to fit into restrictive spaces on-board.
